B.Tech, Computer Science and Engineering – Artificial Intelligence and Machine Learning

Address : #7 Kanshiram Nagar, Sadhguru Layout, 8th main 6th cross
Yelahanka 2nd Stage Bangalore – 560097

Summary

Innovative and detail-oriented Omniverse Developer with strong expertise in building real-time digital twin simulations using NVIDIA's Omniverse platform. Experienced in integrating robotics (Isaac Sim, ROS), real-time sensor data, and physics simulations using PhysX and USD. Skilled in Python scripting, AI/ML integration, and optimization of large-scale 3D scenes for real-world industrial and robotics applications. Proven ability to work cross-functionally with simulation experts, designers, and engineers.

Education

SRM IST-Kattankulathur 2026
B.Tech · Computer Science and Engineering – Artificial Intelligence and Machine Learning CGPA – 7.28/10

Experience

Skill Vertex | [Link](#) Jul 2023 – Aug 2023
Marketing Intern · Internship Bangalore
DRDO-CVRDE | [Link](#) Dec 2024 – Jan 2025
Software Engineer · GUI Developer · Project Intern Avadi, Chennai
Grad Twin | [Link](#) Aug 2024 – Nov 2024
Machine Learning Intern · Internship Sholinganallur, Chennai

Skills

Programming Languages: Python ,C++, Shell Scripting
Languages and Frameworks: NVIDIA Omniverse Kit, Issac Sim, TensorFlow , Scikit-learn, ROS2
Tools and Technologies: NVIDIA Omniverse Platform, USD–Universal Scene Description, PhysX, GPU Accelerated Rendering, Git, Docker, Kubernetes
Design and Simulation Tools: Omniverse Code, Issac Sim, Gazebo, RViz, Unity (Basic) , Unreal Engine(Basic), Revit, Navisworks(BIM–basic)
Technical Skills: Digital Twin Development, Robotics Simulation, 3D Scene Manipulation, Real–Time Visualization and Sensor Simulation, Debugging and Troubleshooting
Areas of Interest: Robotics and Automation, Digital Twin and Simulation, AI/ML for Real World, Industrial IOT System, Composite Materials for Robotics
Hardware Skills: NVIDIA RTX GPUs, Sensor Integrations (Ex: IMU, LIDAR), Microcontrollers (Arduino, Raspberry Pi)

Project

Autonomous Unmanned Ground Vehicle using LiDAR and ROS 2
Developed an autonomous vehicle integrated with LiDAR and ROS 2 for real-time obstacle detection, mapping, and navigation using SLAM. Tested in Gazebo for path planning and autonomous control.
Technologies Used:
ROS 2, LiDAR, Gazebo, RViz, Python, C++, SLAM, Ubuntu
